# Airborne geophysical survey completed over northern portion of Empire's Perth Basin acreage

***Results will play key role in identifying prospects and securing exploration joint venture partners***

Empire Oil & Gas (ASX: EGO) is pleased to advise that an extensive airborne geophysical survey has been completed over the northern portion of its Perth Basin acreage.

As part of the ongoing Black Swan Airborne Geophysical Survey, which is the next key step in Empire's exploration strategy, all data over permits EP 368 and EP 426 has been acquired.

Data is now being acquired over the southern portion of Empire's acreage, namely EP 454.

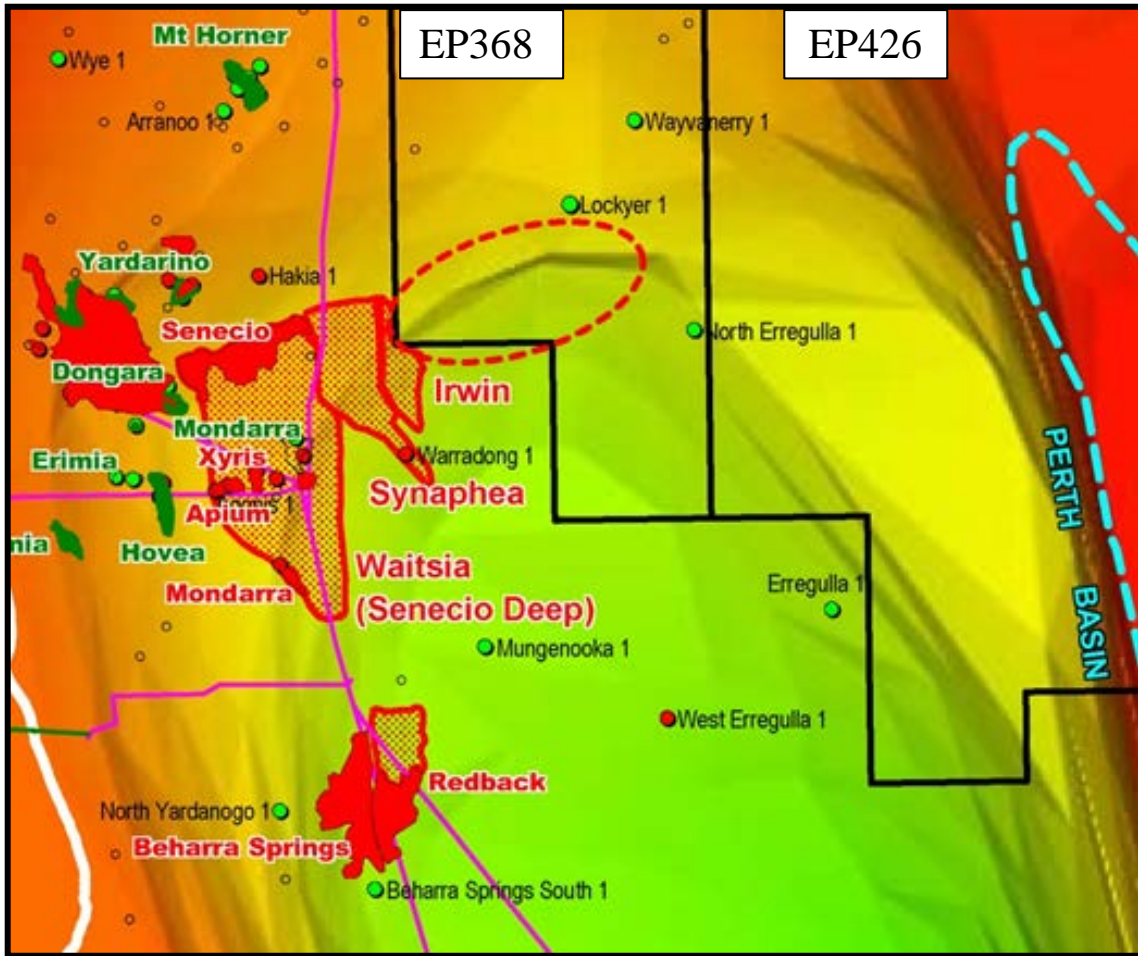

The integrated results of the survey, which are expected to be available in the December Quarter of 2015, will be used to identify exploration leads and prospects. These will in turn play a key role in Empire's strategy to secure joint venture partners for its future exploration program.

## **AWE Discovery**

Empire notes yesterday's ASX release by AWE (ASX: AWE) in which AWE states that the Irwin -1 exploration well located immediately adjacent to EP 368 discovered gas in the Dongara /Wagina reservoirs.

Empire notes that the deeper Kingia reservoir was also encountered in Irwin-1 and it was found to be of similar quality and thicker than the gas-bearing Kingia sands encountered at AWE's recent Waitsia-1 discovery.

Empire believes that the Kingia reservoir potential in EP 368 and EP 426 will provide an important additional exploration play for Empire.

### EP368 and EP426

#### EP426
